

Money and Electricity

The greatest treasure in our nation is the monetary supply. We can create this monetary supply either as an asset or as a debt. In an asset-based monetary system, a \$1 loan at 0% annual compound interest, calculated daily, over 550 years, creates a debt of \$1. In a debt-based monetary system, a \$1 loan at 6% annual compound interest, calculated daily, over 550 years, creates a debt of 214 trillion dollars! Which monetary system would you prefer and have you ever been offered this monetary choice?

Perhaps unsurprisingly, our politicians are reluctant to admit that they have privatised our monetary system, that our monetary supply is now debts, bearing compound interest, a system of financial vampirism! Our politicians have committed treason upon the heart of our nation, they have created a slave plantation where once there was freedom, they have chained us to a financial system of usury and usury is perhaps the most hated crime in human history, the crime which has destroyed almost every civilisation it has ensnared!

The politicians, owned by the debt bankers, are now little more than vaudeville clowns, sent out to terrify the people with four financial demons, those of debt, interest, taxation, and inflation. The politicians are sent to corral the population, to force the people to metaphorically toil beneath the Auschwitz sign 'Arbeit Macht Frei', 'Work will set you Free!' The politicians and bankers, of course, hide the nature of debt money from the people, in case the people grasp the financial mechanics and ignite with rage. Financial simplicity then is veiled behind false complexity and the debt bankers become a species so protected that they may as well be an occult priesthood, surrounded by strange economic 'hieroglyphs'. The people are never told the names of these inner-sanctum debt bankers, those who own the debts and the interest streams. The people are never told that the capital for their loans is created as reflections of their own assets, created within a financial mirror called double-entry bookkeeping. The people are never told of the ancient laws against usury which forbade the accrued interest from exceeding the original loan capital, laws which would reduce the people's '214 trillion dollar debt' to \$2! Instead, the people are told that 'these are the laws for money and there is no other way'. Our financial system then is simply a crime scene created against the laws for fraud, fiduciary duty, racketeering, cartels, odious debt, duress, pyramid schemes, and contracts!

However, all around us, two million species live their lives upon our planet without using the concepts of debt and interest. These species power their communities using life force, a power given freely from the cosmos as the gift of life. We too could create our monetary supply as an asset and not as a debt, we too could define our monetary supply as a 'lake' of life force, just as we use a hydro lake and a spinning turbine to create electricity to power our world.

The droplets of water in this monetary asset 'lake' could be defined as 'human life force traded within a marketplace', or more precisely, 'I will go to the sea for a fish, if you go to the hills for fruits, and tonight we will feast!' The measure for asset money, similar to the electrical measure of the Watt, becomes 'the distance that a typical human being, walking at the normal speed of 5km/hr, will cover within one hour, that is 5000 metres'. This monetary unit is a measure of human physiology, human psyche, time, distance and the speed of light, as a metre is a measure of the speed of light within a vacuum. This is a monetary measure which has echoed throughout the historical human journey, it is a measure which is intrinsically familiar to the human psyche!

This simple asset monetary system is the 'Holy Grail' for finance, a system which fulfils Aristotle's five requirements for authentic money, to be portable, durable, divisible, easily recognisable and intrinsically valuable, qualities which allow asset money to become a system for payment, a measure for prices and a store of value. This asset monetary system also satisfies the economists' dream for a 100% reserve currency which is no longer a pyramid structure of assets and debts, a monetary system which operates using the minimal technological costs, those of debt, interest, taxation, and inflation.

This monetary system will empower the ‘commons’, the great beating heart of our nation which includes the families, carers, students, entrepreneurial businesses, artists, and visionaries, creating an empathic connection between the people. This system will free us from the dungeons of financial psychopathy, sociopathy, usury, and war. This monetary system will free us from hunger, austerity and all the psychological poisons which flower under the cloak of usury. Do you still believe that this monetary system is impossible? Then tell me, have you ever seen an ant colony collapse through debt?

Our nations could use this monetary system to power our world, interest-free. In the Australian example, twenty five million people, times an average of \$20 an hour, times 40 hours per week, times fifty weeks per year, creates a hydro lake of ‘one trillion dollars’, a lake which would power our nation with an efficiency ‘one million’ times greater than if we had used capital borrowed from the international debt markets, the modern version of the slave markets from history!

The people could implement this financial system immediately, the people do not have to wait for our politicians to awaken from their dark dreams of usury and treason. Instead, the people could create their own asset-based monetary system, using Cyclos banking software and a monetary unit we could call ‘The Quantar’, ‘The Q’, a name derived from light quanta and ‘ant’ economics.

Using this Quantar concept, we can calculate the potential labours of the Quantar membership, projected ahead for the next year, to create a Quantar asset ‘lake’ which can power the Quantar community and an international trading market. In this market, each Quantar member would receive 500 free Quantars per year, plus a further universal basic income of 50 Quantars per month. The base hourly wage, for an unskilled worker, would be 10 Quantars per hour. However, a doctor, or a skilled artisan, could charge multiples of this hourly rate, to honour the years which they have invested in their profession and their craft.

Now a Mrs Smith in London can have her lawns mowed by a local student, who can then receive a language lesson from a Japanese teacher in Tokyo, and the teacher, in turn, can receive a basket of vegetables from the local Tokyo market. The world is exchanging the treasures of goods and services, using a monetary system which does not impose the four financial demons. The people will have awoken to the nature of money, the slaves upon their plantations will have discovered that the real treasure in our nation is the life force of the people! This is the monetary ‘gold’, the honey in the ‘human hive’ which the debt bankers have been stealing with their debt confetti, created from nothing, the confetti which we have, in our ignorance, been calling money and ‘wealth’.

This Quantar marketplace could initially be financed by donations and the supply of additional services, such as the merchandising of the Quantar brand. However, when the Quantar marketplace attains a critical mass, perhaps with hundreds of millions of members, Quantar will then have the power to transform the banking structures for our world!

This Quantar marketplace could begin with only ten people! If each of these ten people brought in ten further people, creating a chain of membership, then within only ten vertical levels within this financial chain, we would include every person upon our planet!

In conclusion, we once lit our houses with medieval oil lamps but we now use electricity to power our world. It is time then for a similar technological revolution within our monetary system. We need to awaken to asset-money, we need to awaken to a financial power that can create a human incandescence which will light our entire planet. Welcome then to ‘The Q!’, welcome to ‘ant economics’, welcome to financial freedom!
