

The Quantar!

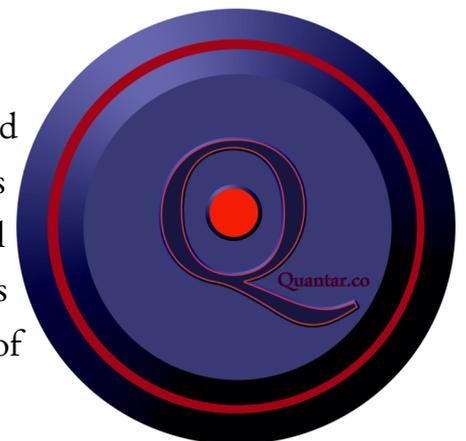

To grasp the power of an ancient philosophy, 'to change the world, change the nature of money', to prove the concepts for asset banking, to turn financial theory into a functioning international banking system, then interested people, including political parties, religious groups, social security organisations, unions, native and ethnic groups, all together, could create an alternative digital currency called the Quantar, or simply 'The Q'! The Quantar is named after light 'quanta' and 'Ant' economics. The Quantar then is a name which suggests the higher aspects for human consciousness.

The Quantar is a monetary unit based upon human life force, a measure which we all intuitively understand, a measure so natural to the human psyche that a ten year old child can understand the Quantar concept, within minutes!

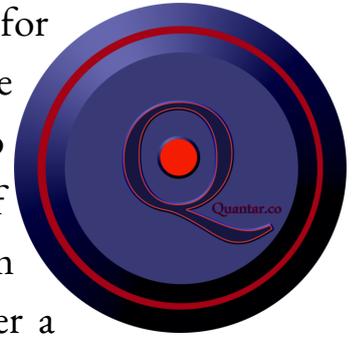

In the Quantar concept, money is simply human life force traded within a marketplace. Money then can be defined as 'I will go to the sea for a fish, if you go to the hills for fruits, and tonight we will feast'! The Quantar hourly measure becomes, 'the distance that a typical human being, walking at the normal speed of 5km/hr, will cover within one hour, that is 5000 metres'. This monetary unit is a measure of human physiology, human psyche, time, distance and the speed of light, as a metre is a measure of the speed of light, within a vacuum. This is a monetary measure which has echoed throughout the entire historical human journey!

There is nothing remarkable about these monetary concepts as our modern market place is based upon the exchange of money for labour, measured by an hour of time and human energy. Further, when we use human life force as our fundamental monetary unit, we avoid the need for a rare and valuable medium of exchange, such as gold, or a privately owned debt currency, mediums of exchange which can be controlled by the financial sociopaths, the criminals who can then drive the natural human economy into usury.

A monetary system, based upon human life force, allows us to avoid the historical situation where we cannot build the essential projects for our nation, such as the infrastructure, due to the financial absurdity that our nation has run out of capital! Money then does not grow on trees. However, money does grow within the hearts of the people, as their almost limitless human life force.

This Quantar monetary system fulfils Aristotle's requirements for authentic money, to be portable, durable, divisible, easily recognisable and intrinsically valuable, qualities which allow asset money to become a system for payment, a measure for prices and a store of value. This Quantar monetary system satisfies the economists' dream for a 100% reserve currency, a monetary system which is no longer a pyramid structure of assets and debts. It is a monetary system which operates using the minimal technological costs, those of debt, interest, taxation and inflation.

Using this Quantar concept, we can now calculate the potential labours of the Quantar membership, projected ahead for the next year. This monetary potential allows Quantar to create an asset 'lake', formed from Quantars, to power the Quantar community, just as a hydro lake can be released through a turbine to create the electricity for our world.

Quantar can use Cyclos banking software as the Quantar 'turbine', allowing Quantar to create a national, or international, Quantar trading market. In this market, each Quantar member would receive 500 free Quantars per year, plus a further universal basic income of Q50 per month.

In this Quantar market, the base hourly wage, for an unskilled worker, would be Q10 per hour. However, a doctor, or a skilled artisan, could charge multiples of this hourly rate, to reflect the years which they have invested in their profession, the years spent developing their craft.

Now a Mrs Smith in London can have her lawns mowed by a local student, who can then receive a language lesson from a Japanese teacher in Tokyo, and the teacher in turn can receive a basket of vegetables from the local Tokyo market. The world is now exchanging the treasures of goods and services, using a monetary system which does not impose the four financial demons, those of debt, interest, taxation and inflation.

This Quantar marketplace could initially be financed by donations and the supply of additional services, such as the merchandising of the Quantar brand. When the Quantar marketplace attains a critical mass, perhaps with hundreds of millions of members, then Quantar will have the power to transform the banking structures for our world!

Welcome to 'The Q!' and for further information, please visit www.sacredmoney.org
